EVERTAUT LTD CLIMATE CHANGE AND ENVIRONMENTAL INITIATIVES 2026

Evertaut Ltd continues to take a proactive and responsible approach to climate change and environmental management. Our initiatives focus on practical action, local responsibility and continual improvement, embedded within our ISO 14001 Environmental Management System.

Local and Responsible Sourcing
Wherever practicable, raw materials are sourced locally, with the majority of suppliers located within a short radius of our premises. This approach reduces transport related emissions, improves supply chain resilience and supports the local economy.

Enhancement of Biodiversity
Our site has been developed with biodiversity in mind. Ongoing planting of trees, hedgerows and shrubs supports local wildlife, alongside the provision of bird feeders, bird baths and habitat features. Our on site 'Pallet Mansion' provides shelter for small mammals and insects, contributing to a balanced local ecosystem.

Sustainable Use of Materials
Materials are procured with full traceability and appropriate Chain of Custody certification, supporting responsible forestry and ethical sourcing. Packaging is reviewed to minimise waste, prioritising recycled and recyclable materials. Where feasible, packaging is returned and reused within the supply chain.

Energy Management and Efficiency
Energy efficiency remains a key focus. All fluorescent lighting has been replaced with energy efficient LED systems across factory, warehouse and office areas. Solar panels are installed on site, contributing to reduced reliance on grid electricity. Energy usage is monitored and reviewed, with further efficiency improvements considered as part of planned investment and maintenance cycles.

Carbon Reduction and Natural Sequestration
Tree planting continues annually to enhance green space and contribute to natural carbon sequestration. This initiative complements wider carbon reduction measures and supports long term environmental resilience.

Waste Management and Reduction
In line with ISO 14001:2015 requirements, waste generation is actively controlled. Obsolete or surplus materials are offered to local community groups for reuse wherever possible before entering recycling streams. Waste contractors are selected to support responsible disposal and zero landfill commitments.

These initiatives demonstrate Evertaut Ltd's continued commitment to environmental responsibility and climate change mitigation, ensuring that operations remain sustainable, compliant and aligned with long term environmental objectives. A full Environmental Aspects and Impacts Register is maintained and available upon request.
